

## **Vid 1 Types + Causes of Pollution – Script**

**What's the definition of the word "Environment" ?**

A person's environment is made up of everything that surrounds him or her including houses, schools, forests, beaches, animals, plants and people.

It can be natural or unnatural.

As for the unnatural environment it is everything made by humans like buildings, factories, cars, planes and machines.

The natural environment is all things, which were created by God without any modification like trees, flowers, animals, mountains, seas and rivers.

But, what's happening to our environment?

It is polluted

Pollution is when something added to the environment that is harmful or poisonous to people, animals and other living things.

Let's start with **Air Pollution**.

It occurs when gases, dust, fumes and smoke released by cars and factories and introduced into the atmosphere in a way that makes it harmful to humans, animals and plants.

The second type of pollution is **Water pollution**.

Every day we use water to cook, do laundry, wash our cars, shower and do many other activities.

Where do you think all this dirty water ends up?

This sewage either treated or not is dumped into the sea and rivers.

Ships spill their oil in the sea.

Besides, factories dump waste there.

This may cause the pollution of water.

We are all responsible for **Land Pollution**, because we throw garbage everywhere, and that affects our environment.

Even if we deposit it on landfills it is still dangerous, because litter doesn't go away.

Farmers use a lot of pesticides, which harm animals and make our food contaminated and unhealthy.

As a result our planet is sick and in danger.

The earth is suffering because of us, Man.
